Streamlit UI / alert preset
Incident Commander
Historian Agent
Ticket Agent
Logs / Deploy / Runbook Agents
Scribe
alert payload → composed report (no LLM)
invoke_agent(report)
1 recall_incidents(service)
prior incidents + suggested_hotfix
2 open_ticket(service, desc)
INC1200## – "In Progress"
3–5 logs_lookup / deploy_lookup (or github_deploy_lookup) / runbook_search
anomaly timestamp + deploy record +
runbook match (Confluence fields)
6 draft hypothesis + all gathered
evidence + suggested_hotfix
correlation_check
(coded tool)
re-derives incident/deploy
timestamps from source data
SUPPORTED / NOT_SUPPORTED
verdict + reasoning
7 update_ticket(work_note)
state derived from verdict: Resolved
8 record_incident(hypothesis, verdict, runbook_id)
stored once (idempotent per incident)
final answer + sly_data (ticket #, verified facts)
UI shows answer, ticket card, "Verified by tools"
